

TeamLogic IT provides comprehensive cybersecurity services to protect your business. To effectively define and support your cybersecurity needs, we start our process with a comprehensive Cybersecurity Assessment.

The cybersecurity assessment looks at your most important IT infrastructure, applications, data and procedures and, through risk, policy and device-level reviews, identifies areas that might need improvement or remediation. We take the result of this assessment and define a project plan to resolve any identified exposures. We will then outline ongoing managed IT services that will assure your business remains secure.

Your cybersecurity assessment will consist of the following elements:

- **Security Risk Report:** This executive-level report includes a proprietary Security Risk Score along with summary charts, graphs and an explanation of the risks found in the security scans.
- **Security Policy Assessment Report:** A detailed review of the security policies that are in place on both a domain wide and local machine basis.
- **Share Permission Report by Computer:** Comprehensive lists of all network “shares” by computer, detailing which users and groups have access to which devices and files, and what level of access they have.
- **Share Permission Report by User:** Organizes permissions by user, showing all shared computers and files to which they have access.
- **Compliance Review:** Considers industry and regulatory compliance requirements for your business. Evaluates potential risk, exposure and fines that could impact the livelihood of your business.
- **Cybersecurity Policy Reports:** A comprehensive review of your written policies and procedures related to password policy, data breach response, mobile use policy and more to protect your business's reputation and the integrity of your IT infrastructure and systems network.

Move forward with **The Color of Confidence**[®]

TEAMLOGIC IT SERVICES CLIENTS IN EVERY ASPECT OF CYBERSECURITY
