

EVERY DAY BUSINESSES CONNECT TO DATA AND COLLABORATE WITH PEOPLE

Connectivity is all-important to your company at every level—from “always on” efficiency to scalability and cost management. It’s worth taking a moment to re-assess whether or not your current communication system is up to the challenge of your workplace environment. Are you one location or many? Local, regional, national or global? Have a dispersed workforce or communicate with vendors and/or customers remotely? What about cloud back-up? Do you have a redundancy system? How do you connect all the different channels of phone, Internet and networks to work smart for your business? With so many variables at play, the guidance of an expert is your first step.

Internet and Wireless Networks—Cloud and shared resources require stable and fast networks. If your current solution does not offer the connectivity your business needs, you may be experiencing slow Internet service and sluggish cloud computing. We will help you experience complete communication freedom by sharing a wide range of Internet and wireless network solutions that deliver such benefits as greater productivity, increased efficiencies and reduced installation and maintenance costs.

Phone Systems—Ready to turn your phone system into a veritable communications powerhouse? Phone systems have evolved from basic send/receive call equipment to sophisticated communication platforms that deliver robust capabilities to businesses of all sizes. TeamLogic IT can apply the latest technologies to work for your organization.

Unified Communications—Connect, communicate and collaborate. If you and your team want more effective ways to handle business from any device anywhere, TeamLogic IT can help you explore those opportunities with unified communications. This is where you will find business class instant messaging and chat, video conferencing, desktop sharing, voice mail, and more.

SD-WAN—Managing a wide area network (WAN) can be complicated and costly. An SD-WAN (software-defined wide area network) may be a viable consideration since software-defined support works well with economical-broadband links while still serving real time data and voice performance. Your business can experience increased bandwidth at lower costs, full visibility into the network and centralized management across branch networks.

Move forward with **The Color of Confidence**[®]

THE BACKBONE OF YOUR BUSINESS

TeamLogic IT is a trusted advisor in the telecommunications space. We can design a solution that meets your needs today and in the future.

Our national network allies with leading providers to bring you data, voice and connectivity solutions that deliver superior quality while serving your budgetary parameters.
