

Malware Protection Services

Long a threat to enterprise computer networks around the world, computer viruses are now targeted toward small- to medium-sized businesses. Malware is the umbrella term used to refer to a variety of forms of hostile or intrusive software, including computer viruses, worms, Trojan horses, ransomware, spyware, adware, scareware, and other malicious programs. It can take the form of executable code, scripts, active content, and other software.

Malware can spread quickly throughout your network infecting everything it contacts. It can take over your interaction with the computer for commercial gain. Malware does more than monitor and interrupt your behavior and functionality it can also steal financial information, monitor web browsing activity for marketing purposes, or route HTTP requests to advertising sites.

Without malware protection services and support you could be left with the high cost of service interruptions, lost data and a threatened reputation with your customers.

At TeamLogic IT, our focus is on protecting users both through technology and process. We help businesses through awareness around what to look for, educating employees, and communicating basic steps to best assure mistakes in this area aren't made. We also have technology and methodology that, when deployed, protects your computer systems, your data and ultimately your business as best as possible against threats. In situations where there is a malware incident, we understand how to best remove the malware minimizing risk to your business.

Our malware protection services are concentrated on prevention. By not allowing any malware to impact your business, we can turn up the heat on potential hackers who try to infiltrate your IT system. Call TeamLogic IT today to guard your business.
